

# Well Testing for Residents

In areas where flooding has occurred, private wells can become contaminated. Changes in water taste, color, or odor can be an indication of contamination from flooding. Your well may be at high risk of contamination if there is standing water over the location of your well. If you would like to have your well tested for bacterial contamination at a discounted rate (\$53), please reach out to Housatonic Valley Health District at [eht@hvhdct.gov](mailto:eht@hvhdct.gov) or 203-264-9616. Additional information can be found here: [https://portal.ct.gov/-/media/departments-and-agencies/dph/dph/environmental\\_health/private\\_wells/pdf/20floodandstormwaterconcernsforpwspdf---updated-august-2023.pdf](https://portal.ct.gov/-/media/departments-and-agencies/dph/dph/environmental_health/private_wells/pdf/20floodandstormwaterconcernsforpwspdf---updated-august-2023.pdf)

Environment Health

## Flooding of Private Wells

Guidance from CT DPH recommends that all private well owners test their well for coliform bacteria when land disturbances, such as flooding, occur.

HVHD is partnering with York Labs to offer **discounted private well testing.**
