

Woodbury PCE Investigation – Eden Acres

General Summary of Woodbury PCE Sampling

Since CT DEEP and HVHD (Housatonic Valley Health District) began sampling on April 16th, 62 private wells in the area have been sampled. 15 private wells have exceeded at least the drinking water action level (with one exceeding bathing action level). 16 private wells have had concentrations of PCE below the drinking water action level, and 31 private wells have been non-detect for PCE.

CT DEEP has also conducted soil and shallow groundwater sampling in the area and has installed 21 monitoring well and collected five (5) soil samples to-date. Analysis of the soil and shallow groundwater sampling results is pending. Additional investigations will take place the week of June 17th. The next steps will be determined once the results have been reviewed.
